IN THIS ISSUE WE HAVE

- ✧ End-term review of the ACA Strategiespage 25
- ✧ Highlights of the implementation of the Recommended HIV/AIDS Strategies for Hong Kong 2012-2016pages 26 - 28

End-term review of the ACA Strategies

The current Recommended HIV/AIDS Strategies for Hong Kong (2012-2016) recommend five Priority Areas for Action during the five-year period, namely:

1. Scale up HIV prevention in priority communities;
2. Maintain holistic and quality HIV treatment, care and support;
3. Foster an environment which supports safer sex, harm reduction and anti-discrimination;
4. Drive strategically informed and accountable interventions; and
5. Enhance partnership and capacity for an effective response within Hong Kong and the nearby region.

With the help of AIDS NGOs and other stakeholders, an end-term review was recently conducted. Details of the review have been uploaded to the ACA website www.aca.gov.hk.

Highlights of the implementation of the Recommended HIV/AIDS Strategies for Hong Kong 2012-2016

During the five year-period, concerted efforts have been made by different sectors of the society, including the government, AIDS NGOs, community members, academia and other stakeholders to control the HIV epidemic. Many innovative programmes have been conducted to expand the coverage of services and enhance its quality. Some of these are highlighted below.

I. Scale up HIV prevention in priority communities
